

## University List App

### Task

Please build a web application to show a list of universities from all over the world.

The requirements are:

1. For the data, you can use api listed here: <https://github.com/Hipo/university-domains-list>
2. Please use reactjs to build this website
3. Mandatory component:
  - a. Navbar
  - b. Search feature
  - c. newsletter (save the data to one json file name users.json)
  - d. Universities card list (show at least: Uni name, country, website)
4. Should be broken down into reusable components

Bonus Requirement:

1. There is a login/register feature and the user can save favourite university

### Deliverables

The application needs to meet these requirements:

1. Use React for building UI
2. Needs to have at least navbar with 3 menu and 3 routes
3. Responsive Design
4. Unit Test, with coverage setup
5. ESLint
6. Good README content - reference:  
<https://gist.github.com/PurpleBooth/109311bb0361f32d87a2>
7. Anything else you think it's cool!

Upload to github and send your repository link to the submission link provided and/or send an email to [foojin@xendit.co](mailto:foojin@xendit.co) within **3 days**.
